DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-6, drawn to a baler, classified in class 100, subclass 240.

Group II. Claims 7-9, drawn to a connecting rod with bearings , classified in class 100, subclass 280.

Group III. Claims 10-13, drawn to a baler plunger, classified in class 100, subclass 280.

The inventions are distinct, each from the other because of the following reasons:

Invention of Group I and invention of Groups (II and III) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as evidenced by claim 1. The subcombinations have separate utility such as a connecting rod and mounting plates for connecting any two elements. Additionally, the subcombination of Group II and Group III have separate utility and do not rely on each other for its operation.

Art Unit: 3725

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups (II and III), restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
